Client Testimonials

"I lay down after the class yesterday and just let my thoughts run... I realized there was far less of a duel going on between the chatty voices and the part of my mind trying to control or fix them. Very interesting! There was a new peace there that I haven't really felt in a while."

Lucy

"You know, I've been thinking about my mind and all of the things you and others teach for so long, but there was something that clicked when I tried this technique. All the theory you talk about just slotted into place."

Rochelle

STRESS TODAY

- More than a quarter (27%) of Americans say they are so stressed they can't function most days. Nearly half (46%) of those under 35.
- Nearly two in five adults (37%) say that when stressed, they can't bring themselves to do anything.
- Around three-quarters of adults (76%) said they experienced health impacts due to stress in the prior month, including headache (38%), fatigue (35%), feeling nervous or anxious (34%), and/or feeling depressed or sad (33%).

- Job stress is the source of more health complaints than financial or family problems.
- Stressful working conditions are associated with increased absenteeism, tardiness, and intentions by workers to quit their jobs—all of which have a negative effect on the bottom line.
